### **Introduction**

In less than three decades human civilization has witnessed unprecedented growth and confluence of information and communication technologies are changing every facet of human society. This onslaught is so swift and remarkable that most of the human population doesn't keep pace with it. Not only diverse information sources and services are now available from remote access but variety is so vast and dazzling that ordinary user can't keep track of ever-emerging resources and services. This emerging scenario needs integration of diverse resources/services through interoperability of online platforms and specialized search mechanism that are intuitive and comprehensive and above all could be used by ordinary user with minimum apprenticeship. To be relevant and competitive in virtual space, this scenario warrants threadbare brainstorming among professional circles in order to come up with possible solutions.
